

Statistics 5301 (Autumn 2017): Intermediate Data Analysis I

Instructor: Prof. Mario Peruggia, email: peruggia@stat.osu.edu

Office Hours: in 205A Cockins Hall

- Monday 11am-12pm (except Sept. 4 [Labor Day])
- Wednesday 10am-11am (except Nov. 22 [Thanksgiving])
- by appointment

Grader: Mr. Qiuyu Gu

Lectures: Monday and Wednesday, 3:00-4:50pm in Baker Systems Engineering (BE) 120

Class Notes: Copies of class notes will be available on Carmen.

Class Attendance Policy: You are expected to attend all lectures.

Course Description, Learning Goals and Objectives:

Statistics 5301 is a first course in a two-semester non-calculus sequence in data analysis covering descriptive statistics, design of experiments, probability, statistical inference, one-sample t , goodness of fit, the two sample problem, and one-way ANOVA.

This course satisfies the General Education (GE) requirement in Data Analysis.

Expected Learning Outcomes: Students understand basic concepts of statistics and probability, comprehend methods needed to analyze and critically evaluate statistical arguments, and recognize the importance of statistical ideas.

Students in Statistics 5301 are expected to be able to identify an appropriate analysis for data collected in a study, carry out such an analysis, examine whether the assumptions behind the analysis are reasonable, and recognize the strengths or weaknesses of the study based on how the data were collected. Doing so requires understanding basic concepts in statistics and probability; the ability to create graphical and numerical summaries of data; understanding how the design of a study affects the conclusions that can be made; and the ability to carry out basic statistical analyses (by hand or using statistical software). Students will conduct analyses of data, including a discussion (in plain English) of what conclusions can be drawn.

The goal of statistics is not calculation, but gaining understanding from numbers. This means that the correct numerical answer will only receive partial credit. The remainder of the credit will be available for choosing the best method of solution and explaining why the method is appropriate. You will also need to interpret your answers in the light of the practical problem.

Prerequisites: The sequence is intended for students with “limited” formal mathematics background (a solid grounding in high school algebra is beneficial). However, in terms of data analysis and interpretation, the conceptual level of the course is high. While many of the students in the course are graduate students (it is a required course in many programs), it is certainly an appropriate sequence for junior and senior level undergraduates.

Books: There is no required textbook for the first half of the course. You may find the book

Introduction to the Practice of Statistics (5th Edition onwards)
by D. S. Moore and G. P. McCabe [IPS]

useful, but it is optional.

For the second half of the course the required text is:

The Statistical Sleuth: A Course in Methods of Data Analysis, 3rd Edition
by F. Ramsey and D. Schafer, 2013 [SS]

Note: *The Statistical Sleuth* is also required for Stat 5302.

Evaluation: Your final course grade will be based on the following weighting of assessment components.

Homework	15%
Midterm 1 (currently scheduled for Monday, September 25 , in class)	25%
Midterm 2 (currently scheduled for Wednesday, November 8 , in class)	25%
Final Exam (currently scheduled for Friday, December 8 , 12:00pm-1:45pm)	35%

Effort, class attendance, and class participation will be taken into account in borderline cases.

Exams: There will be two in-class exams and a final exam. Statistical tables will be provided as needed. Calculators may be used on the exams, but the calculators on cell phones, PDAs, or any other communication device are NOT allowed. You may use one 8.5x11 inch sheet of paper (both sides), with whatever facts, formulas, or explanations you find helpful, for each exam.

Makeup exams: If you absolutely need a make-up exam and have a valid excuse, please see me for the necessary arrangements. However, you must notify me in advance in such a situation. A make-up exam may be a bit harder than the regularly scheduled exam and must be taken within a week of the missed exam. Exceptions to this policy will be permitted only in extreme situations such as serious injury immediately prior to an exam or severe illness requiring hospitalization.

Homework: There will be regular homework assignments (about 10). Homework must be **uploaded to Carmen** on the date it is due. Homework is **not** accepted by email. Late homework is not accepted, but the lowest homework score will be dropped. You are encouraged to work together on the homework, but do not copy any part of a homework. Each student must produce his/her own homework to be handed in.

Feel free to ask me for help after you have attempted the questions. The grader for the course does not have the time to provide detailed explanations on each question. To make up for this, I will try

to prepare homework solutions detailed enough to allow you to understand how the question could be approached. Homework solutions will be available on the class web site.

Homework preparation rules: Homework may be uploaded to Carmen in PDF or Word format. PDF scans of handwritten pages are acceptable. Put your name and the homework assignment number at the top of the first page. Number all pages consecutively. Submit the problems in order, **making sure that the computer output and discussion are placed together** (do not put the computer output at the end of the homework). Include both R code and output in your homework, and make it clear what parts of the output are relevant and show how they answer the questions posed in the homework.

Computing: This class requires you to use the statistical software package called R (<http://www.r-project.org>). This software is free. Some students may wish instead to use RStudio (also free; <http://www.rstudio.com>).

Academic Misconduct

Please help us to maintain an academic environment of mutual respect, fair treatment, and personal growth. You are expected to produce original and independent work for quizzes and exams. Although students are often encouraged to work together on homework assignments, each student is to submit her/his written work in her/his own words. Academic misconduct will not be tolerated and will be dealt with procedurally in accordance with University Rule 3335-31-02. Please refer to <http://oaa.osu.edu/coamfaqs.html> for additional information on academic misconduct.

Addressing Issues of Differing Abilities

Any students who feel they may need an accommodation based on the impact of a disability should contact the instructor privately to discuss their specific needs. Students with documented disabilities must also contact the Office of Disability Services (ODS) (<http://www.ods.ohio-state.edu/>) in 098 Baker Hall (phone: 292-3307; VRS: 614-429-1334) to coordinate reasonable accommodations for the course. ODS forms must be given to the instructor as early in the quarter as possible to be filled out and returned to you.

Cell phones: Cell phones must be either turned off or put on vibrate during class, as cell phones ringing during class disrupt the learning process.

Recording equipment: The use of any type of recording equipment in the classroom is strictly prohibited. Exceptions will be made for students who need to have access to recordings of the lectures because of documented disabilities. Documentation must be obtained through the Office of Disability Services.

E-mail Correspondence: In order to protect your privacy, all course related E-mail correspondence must be done through a valid OSU “name.number” account. If you have not activated this email account, you can activate it at <https://acctmgt.service.ohio-state.edu/cgi-bin/KRB1EntryAdd>
